

**Translation Tip:**  
**How to jump from a KA TD page to  
Crowdin to approve the many strings  
at once**

2018-11-03

Hitoshi Yamauchi

## In 2018 KA convention. A pain point of translation:

- TD (Translation dashboard)
  - no multiple approve method
- Crowdin's proofreading mode
  - multiple string approve method
- Can we have a Crowdin proofreading mode in TD?

# We have the bookmarklet

- Bookmarklet can do it
  - But in my environment, it doesn't work...
- <https://international-forum.khanacademy.org/t/translation-tools-and-bookmarklets/487>
- You might know a great course
  - <https://www.khanacademy.org/computing/computer-programming/programming>

## Two steps to simulate a bookmarklet

1. Jump from TD to Crowdin proofreading mode
2. Filter like a TD page

# (1) Jump from TD to Crowdin proofreading mode

- In a translation dashboard, at the crowdin window
  - (Recommend to use Group by pattern)
  - Click context
  - Click file to jump to the Crowdin
  - Choose proofreading mode

## (2) Filter like a TD page

- In a translation dashboard, at the crowdin window
  - Use metadata to filter (Bookmarklet)
  - Use keywords to filter (as you like)
